Certificates

- Certified from NARSS – National Authority for Remote Sensing and Space Science in Data Mining for space applications from 15/10/2022 to 29/10/2022

Projects

Graduation Project – Multimodal Pathfinding Algorithm in a Mobile Application

- We made an application for helping daily users of public transports to know what to ride to reach from point A to B through the many modes of transportations in Egypt.
- Used Customized A* pathfinding algorithm to determine the best route then from the data of the public transport in Egypt we collected and modified we determine the best modes of transport to reach your goal with the least amount of transfers between modes.

E-shops for electronics

- Using flutter to make an E-commerce project shop for electronics simple yet effective.

Tourist Assistant application

- A tourist assistant app which tell them every monument, museum, every tourism open site there is to go to and tell them a brief description about it and its location. it also tell them about the other places tourist might be interested in like: hotels, clubs and famous restaurants.
